

IN THE SPECIFICATION:

The specification as amended below with replacement paragraphs shows added text with underlining and deleted text with ~~striketrough~~.

Please REPLACE paragraph [0020] with the following paragraph:

[0020] The first and second driving axles 30a and 30b are aligned in a reciprocating direction of the transporting table 70a, so that a moment loaded on the first and second driving axles 30a and 30b is decreased as compared with the conventional driving axles which are provided transversely to the reciprocating direction or provided coaxially. The reciprocating direction is designated by an arrow in FIGS. 1, 2, 3A, 3B, 3C, 6 and 7. Here, the first and second driving axles 30a and 30b are different in height to prevent the first and second driving links 40a and 40b connected thereto from interfering with each other.

Please REPLACE paragraph [0041] with the following paragraph:

[0041] The first and second driving axles 30a and 30b are provided with an engaging device 32, so that the second driving axle 30b rotates reversely to the first driving axle 30a when the first motor 82 drives the first driving axle 30a to rotate. Here, the engaging device ~~30~~32 may include a gear.
